

Jacking Castor D50

Reference: HR-FSF-D50

Tires PA, black

Load capacity: 340 kg/castor

Consists of:

Housing, GD-Al, white aluminum, painted

Plate, St, galvanized

Adjustable foot, NBR, black

Castor, PA, black

Mounting kit, St, galvanized

Load: $F_{\max} = 3400 \text{ N}$

$m = 721.5 \text{ g}$

Jacking castors combine a wear-resistant roller with a height-adjustable and non-slip adjustable foot. At the color-highlighted adjusting wheel, the base can be extended with an open-end wrench. Due to the stepless adjustability of the foot, floor unevenness with a height of up to 10 mm can be compensated. As soon as the adjustable foot is retracted, the entire construction can be moved. Jacking castors are designed for loads up to a maximum of 3,400 N per roller. The scope of delivery includes a mounting kit suitable for base plates.
