

Earthing terminal 6

Reference: EA-6

Consists of:

T-slot nut 6 St M6 with guiding ridge, galvanized

Threaded pin DIN916-M6x25, St, galvanized

Hexagon nut DIN934-M6, brass

Washer DIN9021-6,4, brass

Fan disc DIN6798-A6,4, St, galvanized

m = 13.0 g

Earthing terminals are used to ground profile constructions. The profiles can thus be integrated into the protective conductor system. The contact points are created by the defined destruction of the anodized layer in the groove base and on the groove flanks. Assembly is done by screwing in the threaded pin. Important: During installation the cable lug must be located between the serrated lock washer and the brass washer.
