

Central-fastening set 8, galvanized

Reference: ZVS-8

Consists of:

Bolt 8 with hole, St, galvanized

Clamping bolt 8, St, galvanized

Spring element, St, stainless steel

Spring element M10, St, galvanized

Cap, PA-GF, traffic grey A similar to RAL 7042

m = 42.0 g

The central-fastening set 8, galvanized enables right-angled profile connections. A special feature of the connector is that the grooves remain free. Thus surface elements can be mounted without any processing. The central-fastening set 8 is mainly used for assembly of protective and partition wall systems. Due to a reduced clamping force and lack of anti-twist lock, the connector is only suitable for light applications. Furthermore it is recommended to use central-fastening sets only combined with panel elements inserted in the groove. For mounting connection processing according to drawing is required.
