

T-slot nut 8 St M4 with guiding ridge,
ESD, galvanized

Reference: NS8-M4-STEG-ESD

Material: St
Surface: galvanized
m = 11.0 g

ESD T-slot nuts St have an upsetting on the top side, which ensures a conductive connection between the basic profile and the attached part. The T-slot nuts can be swiveled into the profile groove in any position and are used to fasten medium-heavy components. The T-slot nut is fixed by a spring-loaded ball. The attached guiding ridge prevents the T-slot nut from twisting in the profile groove.
