

LED-light 1782

Reference: SYSTEMLED-1782

Cover: Microprisms

Length: 1782 mm

Power: 80 Watt

Protection class: IP50, protection class 1

Light color: Daylight white 5,700K 3-step
MacAdam

Beam angle: 90°

Connection: 230V - AC (GST18)

m = 6.63 kg

The robust LED-light is specially designed for system workstations. It is connected via the standard GST18. The power supply unit (230V) is installed directly into the LED-light. In addition, the light offers homogeneous, glare-free and flicker-free illumination. From an economic point of view, it is particularly energy-efficient. The LED-light is also designed for 60,000 operating hours and is also maintenance-free. An on/off switch is attached to the housing. The LED-light can be easily mounted on the profile groove using a separately orderable [fastening set](#). Suitable connection cables are available.
