DATA SHEET

Bearing unit 8 D14 e

Reference: LE8-D14-E

C = 7800 N $C_0 = 4400 \text{ N}$ Consists of: Bearing unit 8 D14 e, AI, anodized Bolt 8 D14 e, St, galvanized Roller D14, St, bright M = 20 Nmm = 380.0 g

Bearing units are used to build linear slides. They are used exclusively in pairs; excentric/centric. Excentric bearing units can be adjusted backlash-free at a later time. Bearing units must always be provided with wiper and lubricating systems to avoid premature wear. For high loads, it is recommended to pin the bearing units by a cylinder pin m6x30. Button-head screws M8x16, galvanized and washers ISO 7089 - 8, galvanized are required for fastening to the profile groove 8.
