

Bearing unit 8 D14 z

Reference: LE8-D14-Z

$C = 7800 \text{ N}$

$C_0 = 4400 \text{ N}$

Consists of:

Bearing unit 8 D14 z, Al, anodized

Bolt 8 D14 z, St, galvanized

Roller D14, St, bright

$M = 20 \text{ Nm}$

$m = 375.0 \text{ g}$

Bearing units are used to build linear slides. They are used exclusively in pairs; excentric/centric. Excentric bearing units can be adjusted backlash-free at a later time. Bearing units must always be provided with wiper and lubricating systems to avoid premature wear. For high loads, it is recommended to pin the bearing units by a cylinder pin m6x30. Button-head screws M8x16, galvanized and washers ISO 7089 - 8, galvanized are required for fastening to the profile groove 8.
