

T-slot nut 6 St M6 with guiding ridge,
galvanized

Reference: NS6-M6-STEG-K

variant: guiding ridge, concave

Material: St

Surface: galvanized

m = 5.2 g

T-slot nuts 6 St with guiding ridge for fastening medium-heavy components can be swiveled into the profile groove in any position. The T-slot nut is fixed by a spring-loaded ball. The attached guiding ridge prevents the T-slot nuts from twisting in the profile groove. The concave shape of the T-slot nut makes it easier to insert into the groove.
