

T-slot nut 8 St M6 heavy, galvanized

Reference: NS8-M6-S

Material: St

Surface: galvanized

m = 14.5 g

T-slot nuts St heavy are used for particularly high loads. Since the T-slot nut is adapted to the contour of the profile slot, forces are optimally transferred to the aluminum profile. T-slot nuts heavy are inserted into the groove from the front of a profile. They are secured axially against shifting by a spring-loaded ball.
