Housing aluminum, anodized

Switch illuminated green, 2-pole, switches sockets

4 Plug-ins with earthing contact

Switch illuminated green, 2-pole, switches power output

GST18 connections (power input and output)

m = 448.0 g

The multi socket power strip, Al (4 outlet) is a stable, industrial-suited multi-socket power strip with four Schuko sockets and two illuminated switches in the familiar look (housing natural anodized, front view in black). The sockets can be switched off by a switch. In addition, the power output can also be switched, which can be used as a light switch, for example. The multi-socket power strip is equipped with GST18 connections, which allow a maximum connected load of 16 A and 3,500 W. As an option, the multi-socket power strip can be simply screwed onto the profile groove using a separately ordered [fastening set](#). Suitable connection cables are available as accessories.
